

1st Laboratory Examination

Setting up in AWS

1. Login to your AWS Account (root or IAM).
2. Create an S3 bucket with the name 1st-Lab-<LastName>-<IDNumber>.
(Take a screenshot of your S3 bucket and paste it inside the box)

3. Create an access key in your **Security Credentials**.

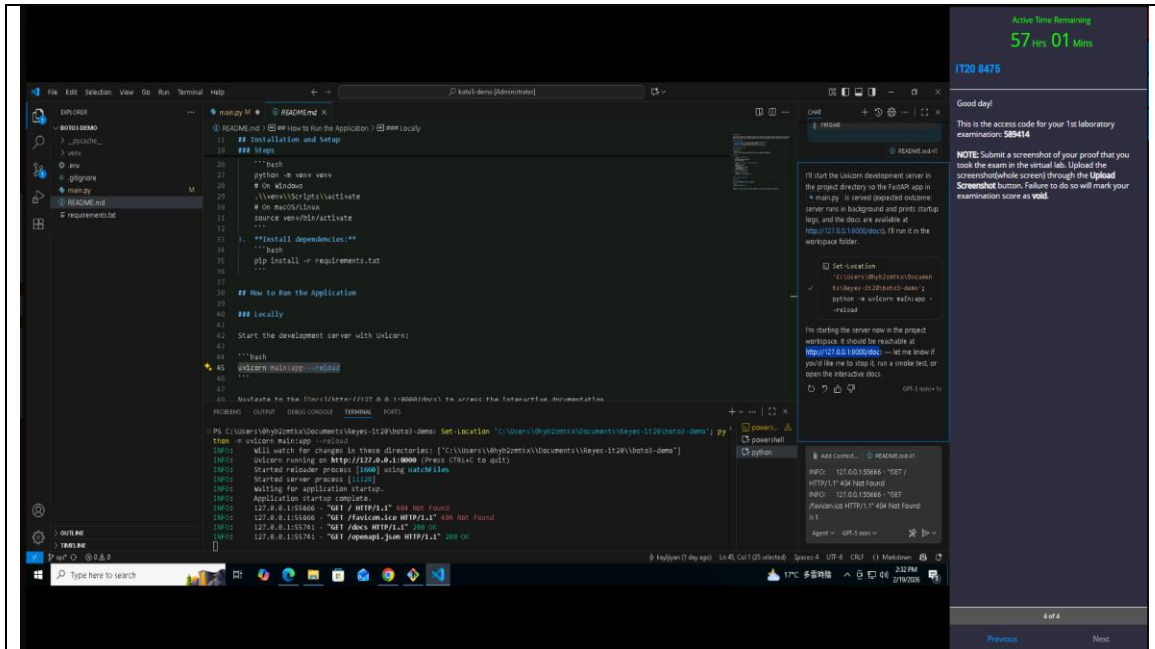

(Paste your access keys inside the corresponding box)

AWS_ACCESS_KEY_ID	AKIA45OTN7MSV6IQFBGW
AWS_SECRET_ACCESS_KEY	D97rjmjgaeWH6fVqkLZcbgUw2h5+GjpHnVuSpr0V

Cloning the application

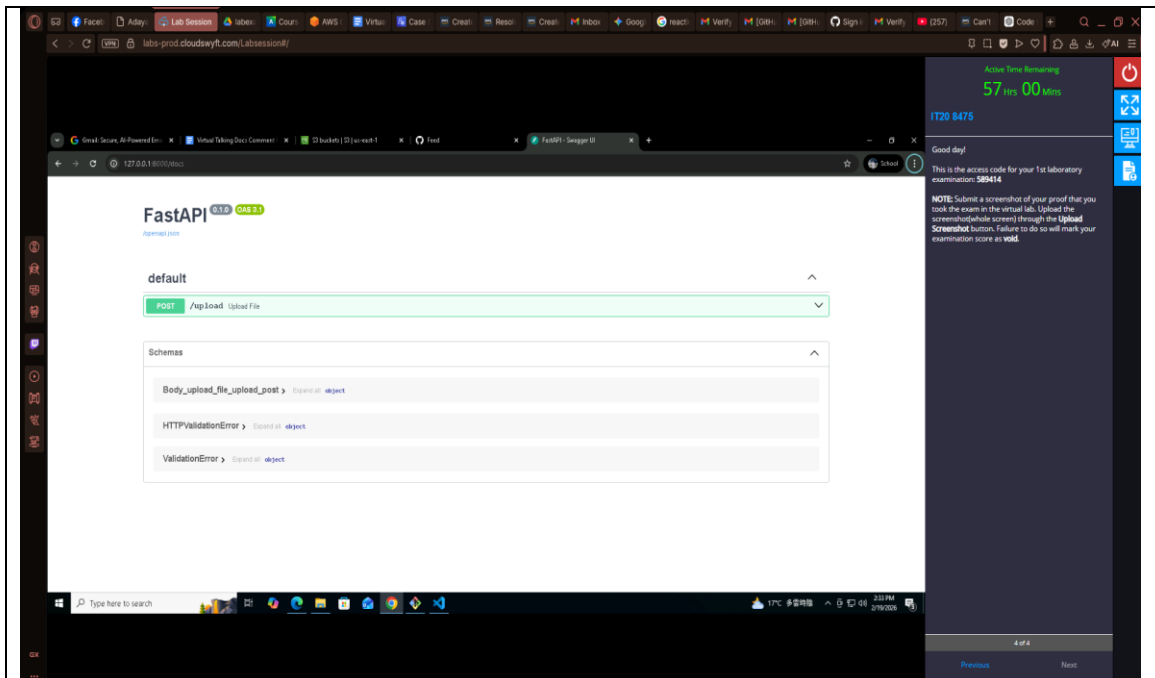

4. Clone the application from this [repo](#). (The setup instructions are in the README)
5. Fill up the **Environment Variables** (inside the **.env** file) with the corresponding values.
6. Run the application. (The command can be found inside the README)

(Take a screenshot of the running application in the `/docs` path and paste it inside the box)

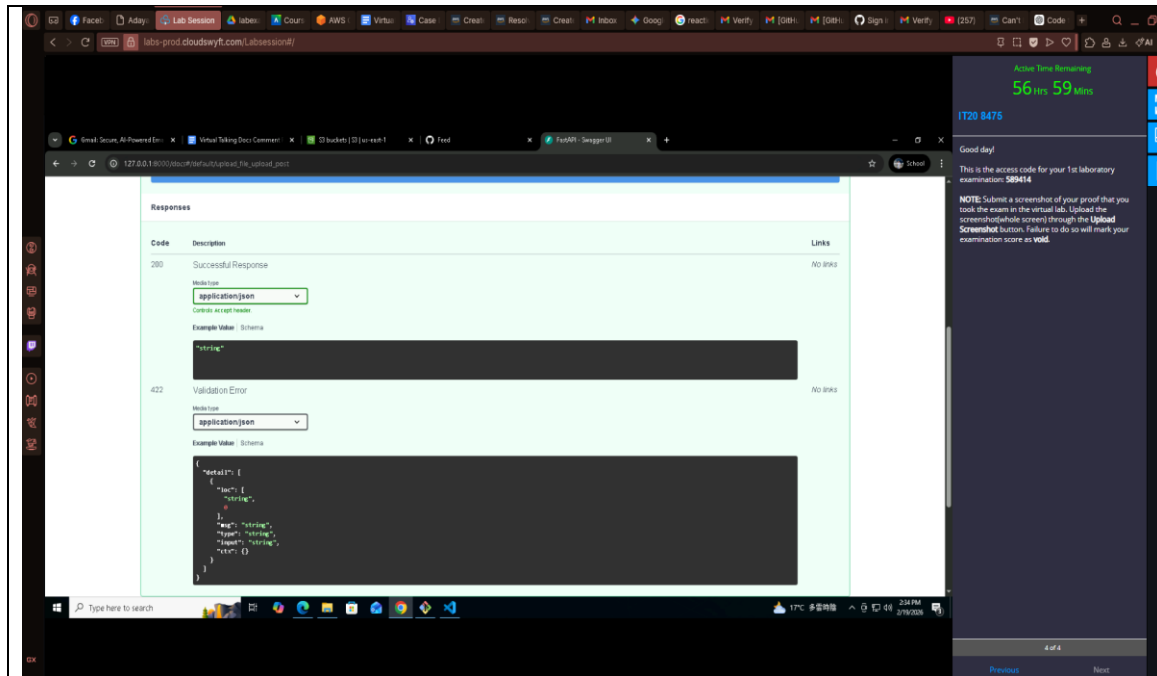

7. Upload a file using the `/uploadfile` endpoint.

(Take a screenshot of the success message from the `/uploadfile` endpoint and paste it in the box)

(Take a screenshot of the uploaded file in your S3 bucket and paste it in the box)

Rubric

Criteria	Evidence Required	Points
A1. S3 Bucket Created	Screenshot of S3 bucket list showing bucket name	10 pts
A2. Correct Bucket Naming Format	Bucket name must be exactly: 1st-Lab-<LastName>-<IDNumber>	10 pts
A3. Access Keys Created	Access key ID and secret access key pasted in the correct box	10 pts

Criteria	Evidence Required	Points
B1. Application Runs Successfully	Screenshot of app running (server started, no crash)	5 pts
B2. /docs Page Works	Screenshot of browser showing /docs page successfully loaded	5 pts
B3. Success Message Works	Screenshot of success message from the endpoint	5 pts
B4. File Uploaded In S3	Screenshot of object inside the S3 bucket	5 pts
