Use these codes

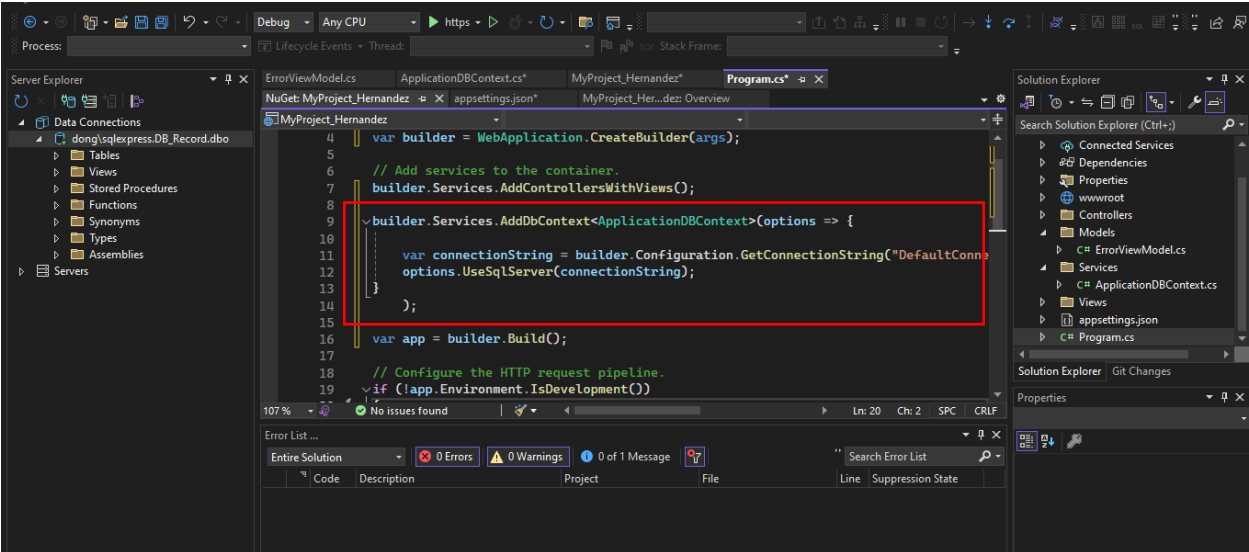

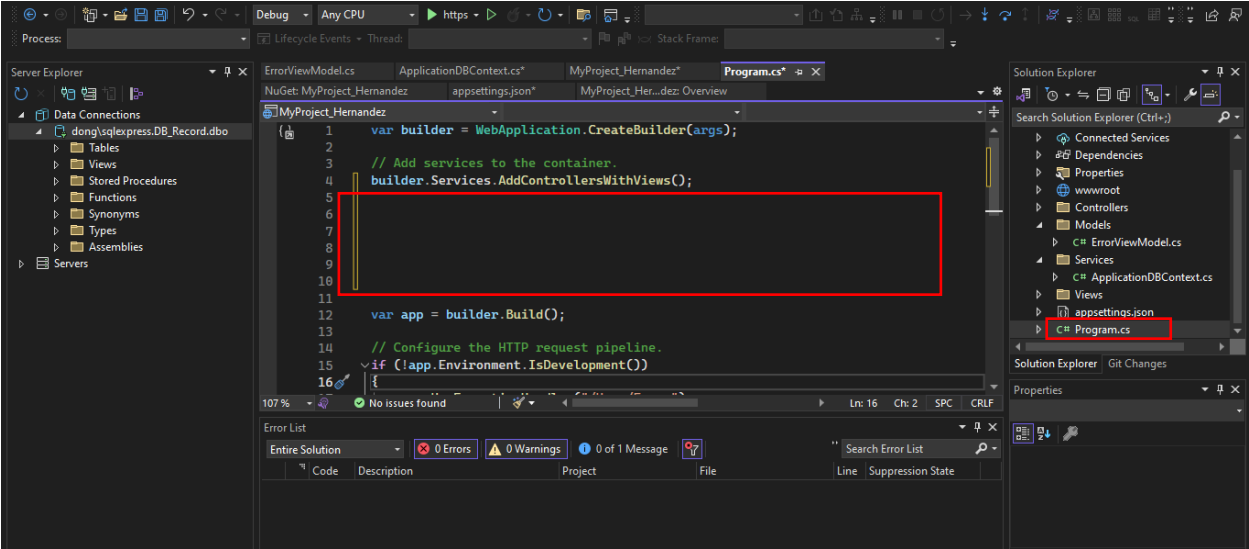

```

public class ApplicationDbContext : DbContext
{
    public ApplicationDbContext(DbContextOptions options): base (options)    {
    }
}

```

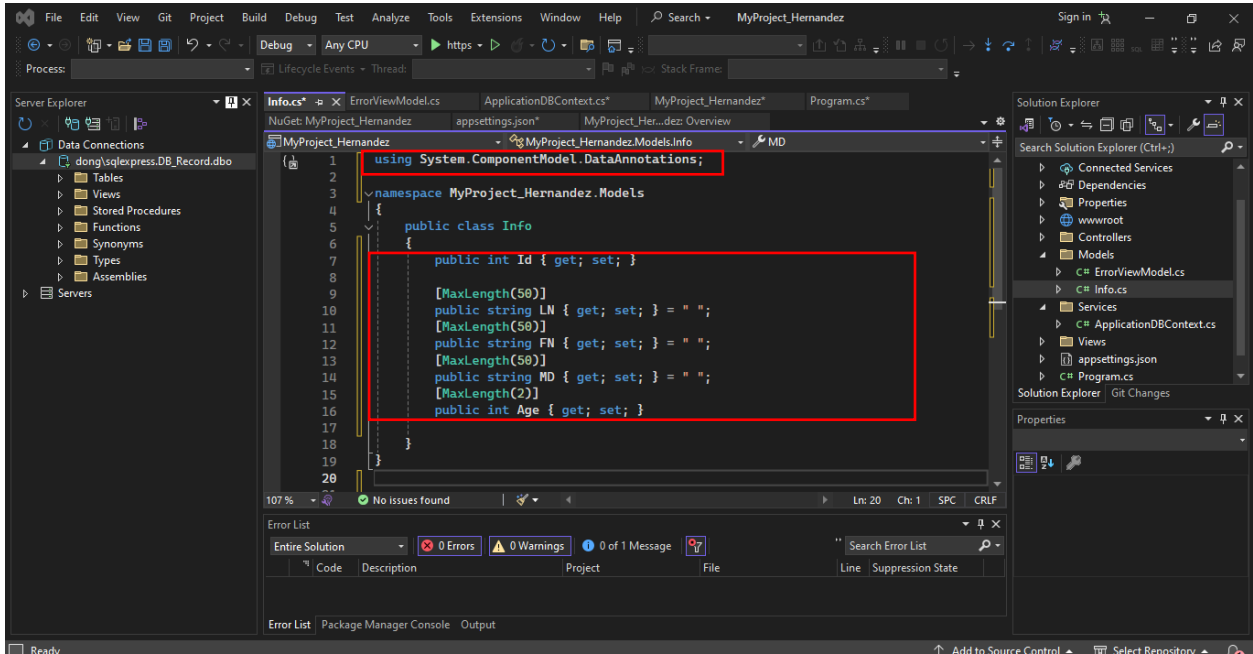

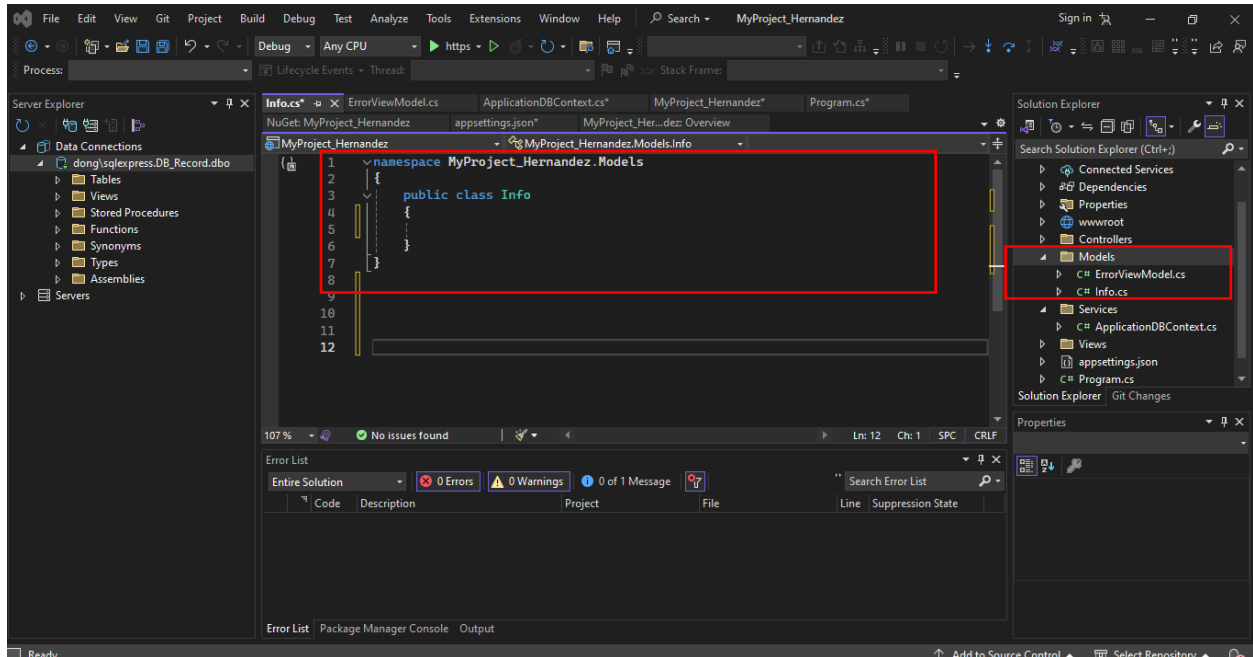

Click **Program.cs** (File)

```
builder.Services.AddDbContext<ApplicationDbContext>(options=> {  
  
    var connectionString = builder.Configuration.GetConnectionString("DefaultConnection");  
    options.UseSqlServer(connectionString);  
}  
);
```

Right Click -**Model (File)**

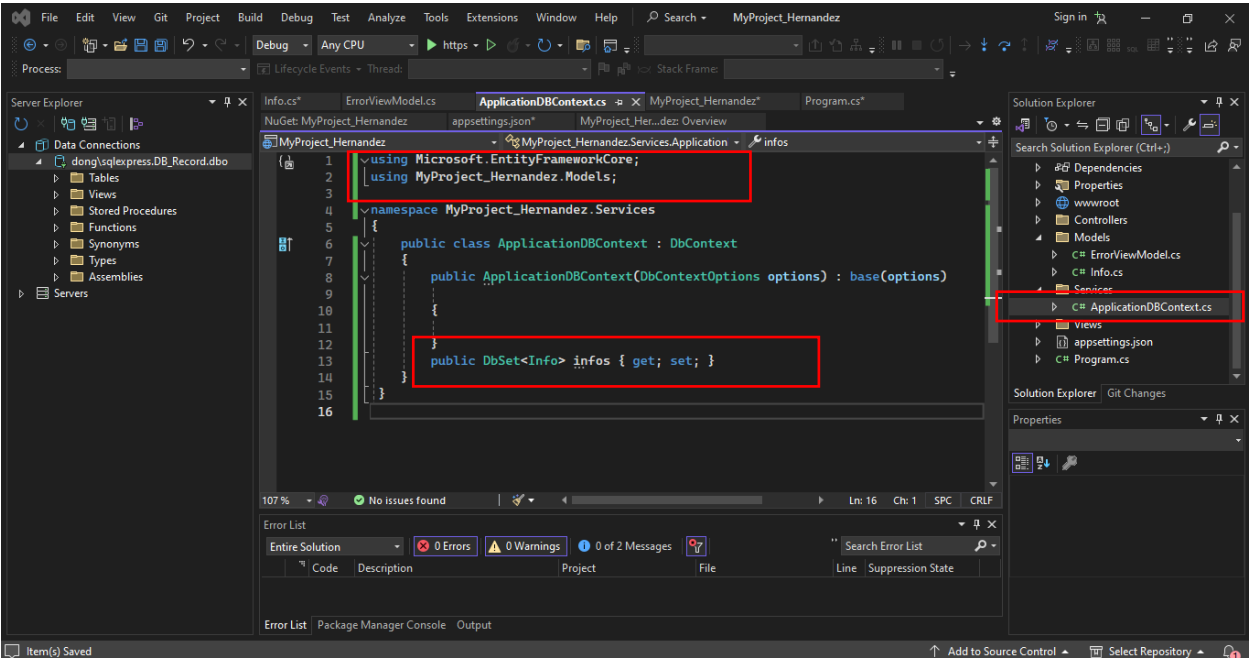

-Create Class (Model) Ex. **Info**

```
public int Id { get; set; }
```

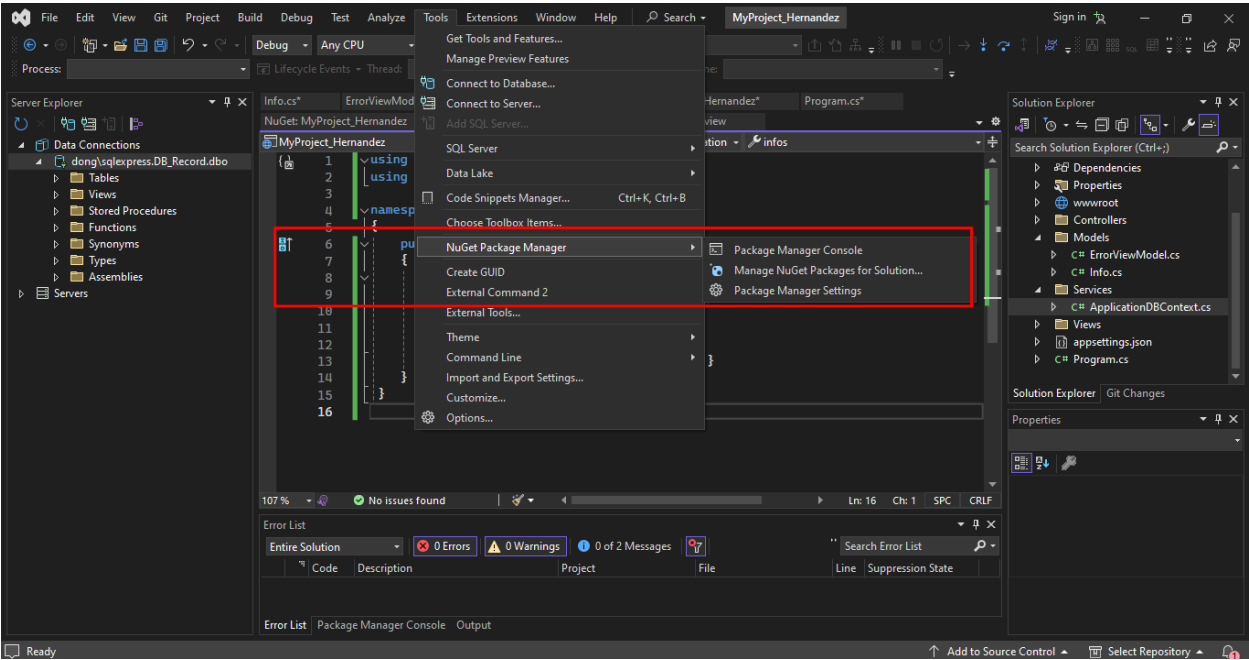

```
[MaxLength(50)]  
public string LN { get; set; } = "";  
[MaxLength(50)]  
public string FN { get; set; } = "";  
[MaxLength(50)]  
public string MD { get; set; } = "";  
[MaxLength(2)]  
public int Age { get; set; }
```

Back ApplicationDbContext.cs

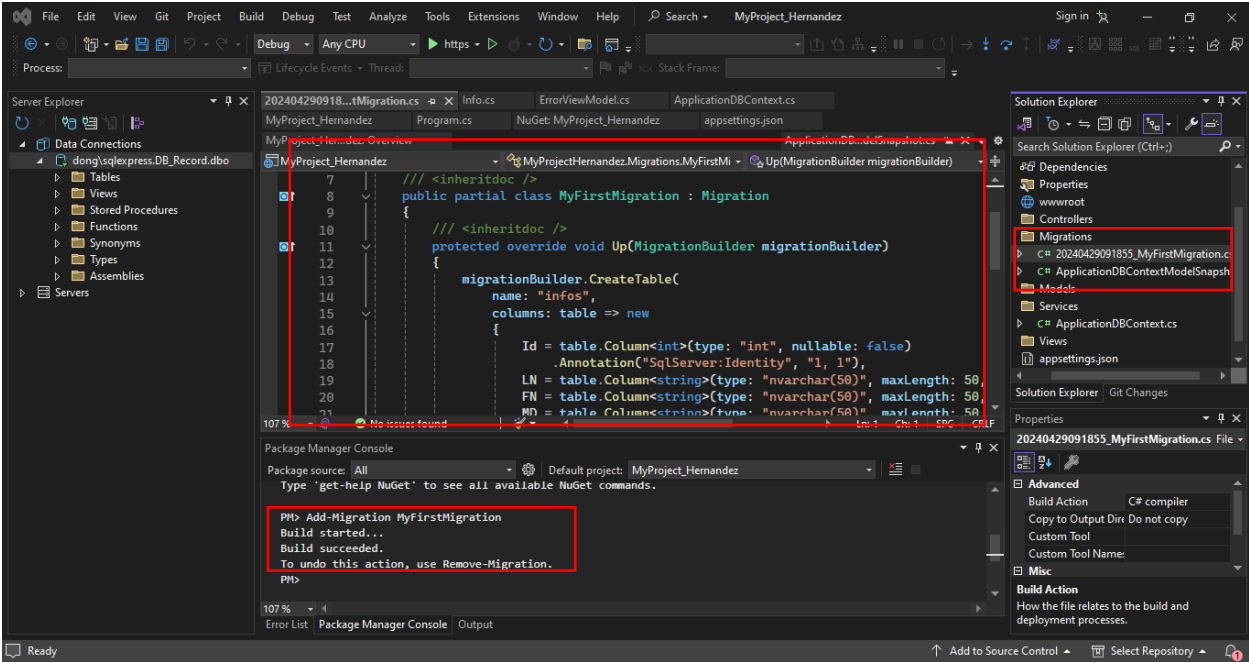

public DbSet<Info> infos { get; set; }

Click Package Manager Console -Tools

In your **Package Manager Console**

Type - **Add-Migration MyFirstMigration**
