The Dashboard provides an overview of the system’s key activities and data. It displays important information such as total requests, approved transactions, pending approvals, and system notifications. This page helps users quickly monitor procurement activities and make informed decisions based on real-time data.

Update/Edit
Page
(Screenshot)

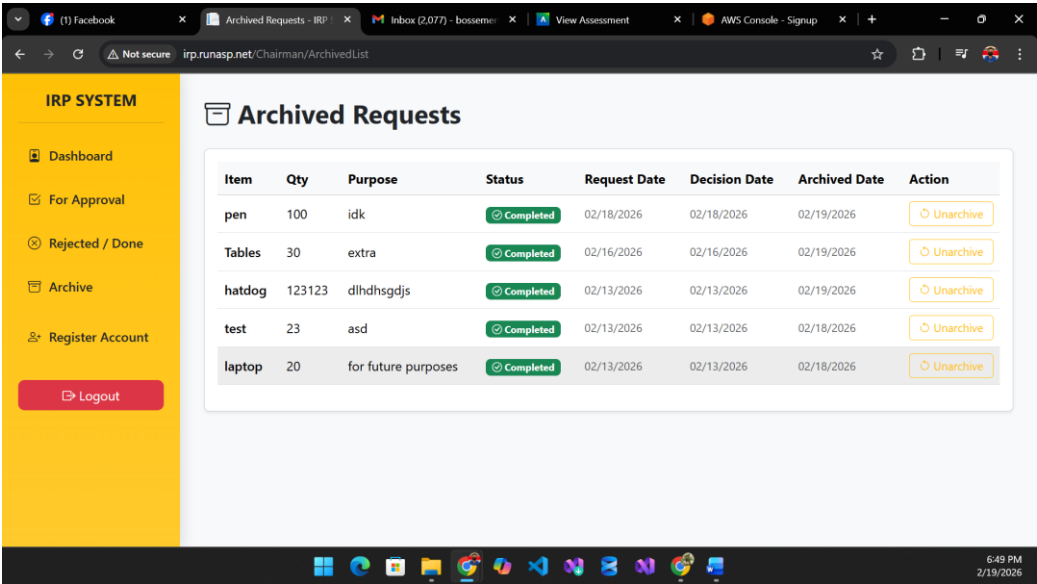

The Update/Edit Page allows authorized users to modify existing records in the system. Users can update details such as request information, item descriptions, and quantities. This function ensures data accuracy and flexibility, enabling corrections and adjustments when necessary.

Update/Edit Page - Source Code (Screenshot)

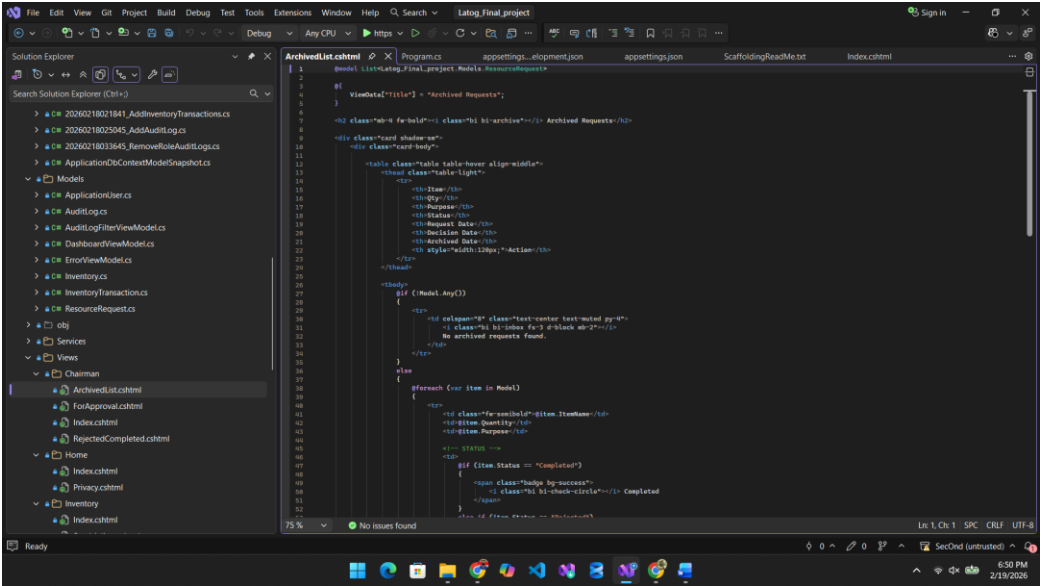

Archive (Screenshot)

The Archive feature stores completed, cancelled, or inactive records for future reference. Instead of deleting data permanently, the system moves these records to the archive section. This helps maintain historical data, supports auditing, and prevents accidental data loss.

Database – SQL Server (Local) Screenshot

	database stores all system data such as resource requests, users, and transactions in SQL Server (Local). It allows the system to perform operations like inserting, updating, retrieving, and deleting records. This ensures organized data management and reliable system performance.
